

Important Facts to Note concerning CgB custom developed applications:

- All CgB custom Access® applications are fully warranted against program defects or program errors.
- Source Code is owned by the Client and CgB does not use cookie cutter techniques to re-distribute modified applications to other Clients.
- Source code can be delivered as open (.mdb) or as a Run Time Executable (.mde).
- Runtime Version of Access® is available to the client for installations of the full version of Access is not practical. Eliminates need for additional Access license purchases.
- Any Visual Basic for Applications (VBA) modules, procedures or functions are completely documented.
- Can be connected to MSAccess, MS SQL Server and most databases accepting ODBC or ADO connections.
- All custom applications are menu and table driven. No need for extended user knowledge of Access.
- Application separate from database to share server and workstation horsepower.
- Simple to complex database table schemas.

Development of cost effective solutions for small to mid sized businesses:

- database front ends
- reporting tools
- work flow applications
- log systems
- dispatch systems
- call tracking systems
- order transaction systems
- utilities
- executive information systems
- database & data warehouse extraction & data massaging

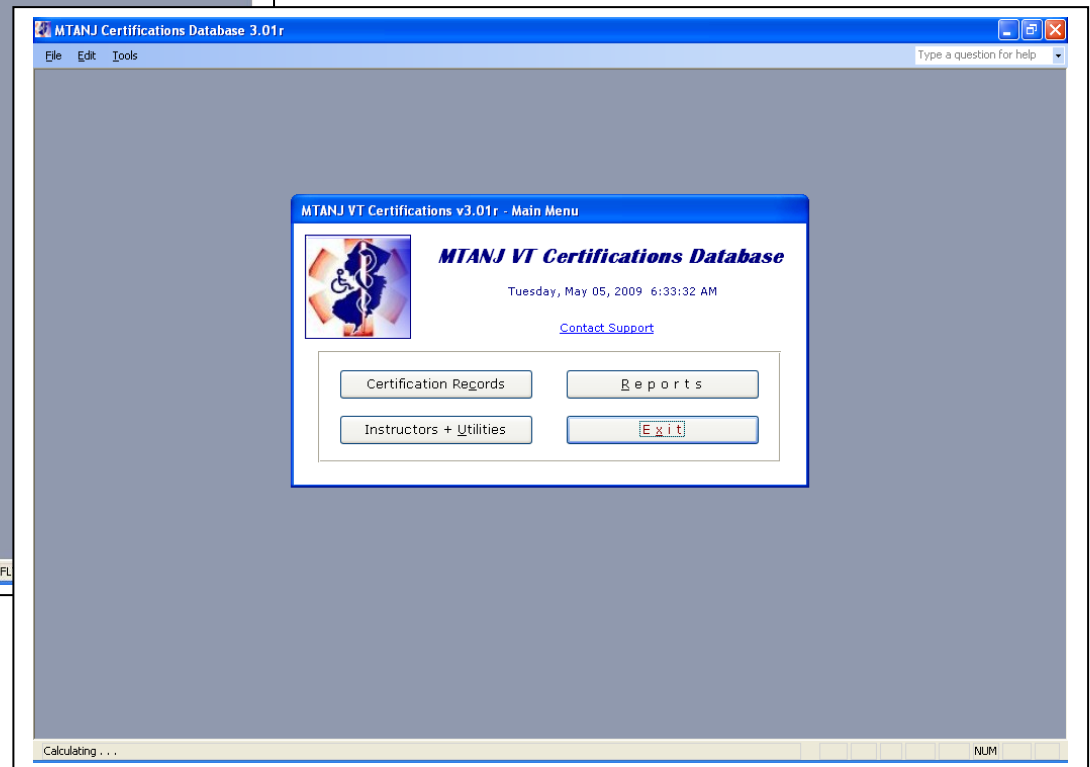

for Information Systems

All CgB client-sever applications developed in Microsoft Access® are completely menu driven. No need for the user to have advanced knowledge of Access in order to use. Data is safeguarded against accidental deletions and damage.

Below are examples of switchboard type and button menus. Web style 'hyperlink' menus are also available.

Example of Record Index Screen with Sort – Search – Add & Edit functions. (name and phone partially obscured in example)

Form View NUM

Application control records such as State codes, work types, expense types, etc. are table driven and not hard coded. No need to call the developer to add simple parameters after the installation.

Record integrity is protected by the application so that data cannot accidentally be deleted, lost or damaged.

The screenshot shows the 'CgB - for Information Systems' application window. A 'Clients' sub-window is open, displaying a form for client data. The form fields are as follows:

First Name	Harry	Client ID	1
Last Name	The Hat	Company Name	Harry's Hats
Address	123 Some Street	Contact Title	President
City	Any Town	Phone Number	000-000-0000
State/Province	NJ	Fax Number	000-000-0000
Postal Code	00000	Referred By	Me
Country/Region	USA	Notes	

Below the form is a table of projects:

Project Name	Total Hours	Total Amount	Payments	Amount Due
Web Database	14	\$935.00		\$935.00

At the bottom of the 'Clients' window, there are buttons for 'Projects...', 'Time Cards...', 'Payments...', and 'Preview Invoice...'. Below these buttons is a record navigation bar showing 'Record: 1 of 2'.

Reports & Selectors can be simple point and click or involve more complex data selection criteria.
